Doc3, LLC - Block 46.02, Lots 1.01 & 2.01  
City of Sea Isle, Cape May County, NJ

The 5,500 SF property, located on Landis Ave is currently an existing restaurant. The Applicant proposes a 4,350 SF mixed-use building with a restaurant on the first floor and a total of four (4) dwelling units on the 2<sup>nd</sup> and 3<sup>rd</sup> floors above. A stormwater trench with four 8" perforated PVC pipe surrounded by stone has been proposed to mitigate runoff. The design is to encompass the entire lot area minus any waterway area.

**Pre-Development Runoff Calculation**

$$Q = ciA$$

$$c = 0.30 \text{ (existing coverage)}$$

$$i = 7.70 \text{ in/hr } (T_c = 6 \text{ Min.})$$

$$A = 5,500 \text{ SF} = 0.126 \text{ Ac.}$$

$$Q = (0.30)(7.70 \text{ in/hr})(0.126 \text{ Ac.})$$

$$Q = 0.291 \text{ CFS}$$

$$V = (Q) T/t$$

$$T/t = 2.5(T/c) \text{ where } (T/c) \text{ is 6 minutes}$$

$$V = (0.291 \text{ CFS})(15 \text{ min.})(60 \text{ sec./min})$$

$$V = 261.9 \text{ CF}$$

**Post-Development Runoff Calculation**

$$Q = ciA$$

$$c = 0.99 \text{ (proposed coverage)}$$

$$i = 7.70 \text{ in/hr } (T_c = 6 \text{ Min.})$$

$$A = 5,500 \text{ SF} = 0.126 \text{ Ac.}$$

$$Q = (0.99)(7.70 \text{ in/hr})(0.126 \text{ Ac.})$$

$$Q = 0.961 \text{ CFS}$$

$$V = (Q) T/t$$

$$T/t = 2.5(T/c) \text{ where } (T/c) \text{ is 6 minutes}$$

$$V = (0.961 \text{ CFS})(15 \text{ min.})(60 \text{ sec./min})$$

$$V = 864.9 \text{ CF}$$

**Volume Calculation**

$$(\text{Post-Development Runoff}) - (\text{Pre-Development Runoff})$$

$$864.9 \text{ CF} - 261.9 \text{ CF} = 603 \text{ CF}$$

$$30\% \text{ Volume} = 181 \text{ CF}$$

**Storage Calculation**

Four 8" Pipes @ 50 LF

$$3.14 \times (.33)^2 \times 4 \times 50 = 68.39 \text{ CF}$$

6' x 53' Stone Trench

$$[(6' \times 1.33' \times 53') - 68.39] (0.35) = 124.09 \text{ CF}$$

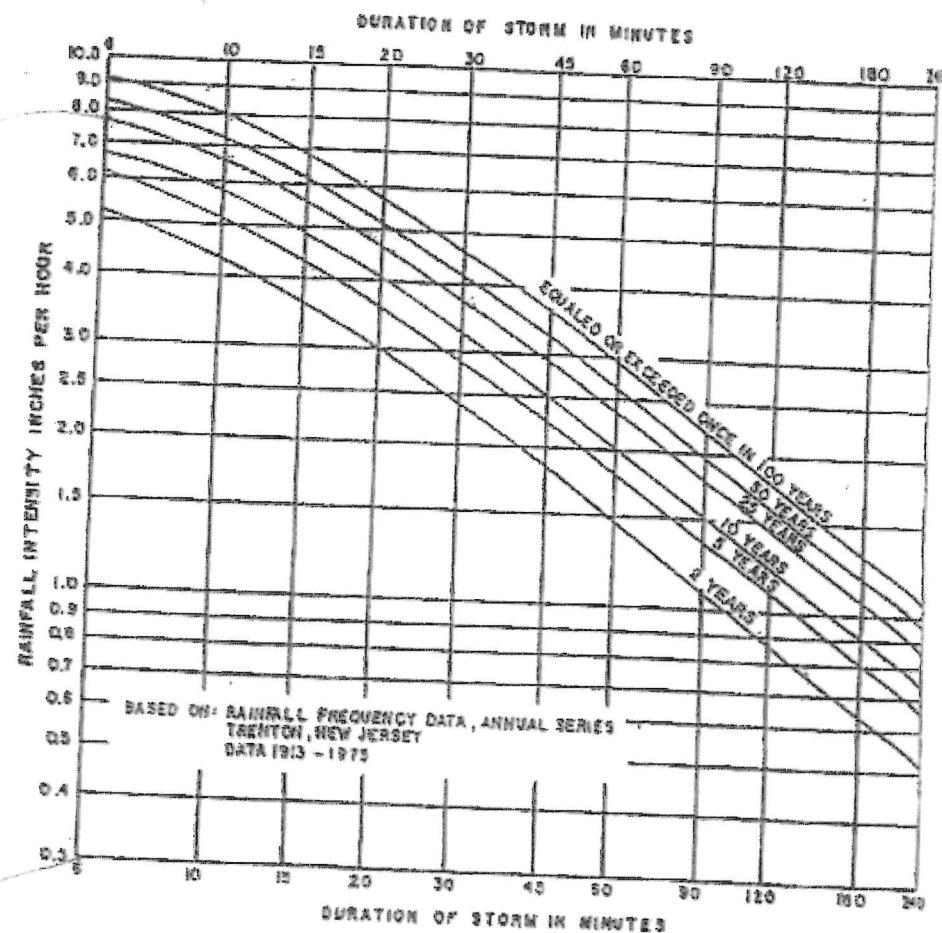

$$\text{Total} = 192.48 \text{ CF} > 181 \text{ CF Required}$$

**Summary:**

The difference in the 25 year design storm generates approximately 603 CF of stormwater runoff from all improvements, of which 181 CF (30%) is required to be stored. The infiltration system has been designed to store approximately 192.48 CF of runoff. If the quantity of runoff exceeds the capacity of the trench, runoff will flow out of the proposed inlet and towards existing drainage patterns on 47th Street.
